Professional Summary

Geo-IT Consultant and AI Software Developer with an MSc in Artificial Intelligence and hands-on experience across geospatial platforms, backend engineering, automation, monitoring, and LLM-based applications. Strong practical knowledge of ArcGIS Enterprise/Pro, QGIS, FME, GDAL/OGR, PostgreSQL, Python, FastAPI, Docker, Kubernetes, Splunk, and cloud/VPS deployment. Experienced in building data-processing pipelines, GIS publishing workflows, operational dashboards, and AI-driven solutions that connect real-world data, APIs, and user-facing applications.

Core Skills

GIS & Geo-DevOps	ArcGIS Enterprise, ArcGIS Pro, ArcGIS Online, QGIS, FME, GDAL/OGR, PROJ, GML, GeoPackage, GeoJSON, KML, Shapefile, geospatial data conversion, hosted feature-layer publishing
Backend & Automation	Python, FastAPI, Flask, REST APIs, PowerShell, Bash, JavaScript, API integration, data validation, scheduled jobs, workflow automation
Databases & Data	PostgreSQL, SQL, MySQL, MongoDB, MinIO/S3-compatible storage, structured JSON logging, data pipelines
DevOps & Monitoring	Docker, Docker Compose, Kubernetes, Linux, Windows Server, Git, GitHub, NGINX, Cloudflare, Portainer, Splunk, Grafana, Loki, Prometheus-style metrics
AI & Machine Learning	LLMs, NLP, prompt engineering, OpenAI, Claude, Gemini, LLaMA/open-source LLMs, PyTorch, TensorFlow, Keras, computer vision, intelligent agents
Web & Design	React, HTML, CSS, WordPress, Bootstrap, Figma, Adobe Photoshop, Adobe Illustrator, CorelDRAW
Professional Skills	Analytical problem solving, stakeholder communication, incident/ticket handling, technical documentation, teamwork, adaptability

Professional Experience

RD New Solution

Geo IT Consultant

2025 – Present

Netherlands

- Support geospatial and GIS platform work for enterprise environments, including ArcGIS Enterprise, ArcGIS Pro, QGIS, FME, and related data-processing workflows.
- Develop and maintain geospatial automation pipelines for converting, validating, and publishing spatial data formats such as GML, GeoPackage, GeoJSON, KML, and Shapefile.
- Implement GML-to-GDB and ArcGIS publishing workflows, including GDAL/OGR-based processing, ArcGIS Enterprise integration, upload handling, and service/layer validation.
- Build and troubleshoot containerized geospatial services using Python, FastAPI, Docker, Kubernetes, PostgreSQL, and MinIO/S3-compatible storage.
- Create operational monitoring and diagnostics using Splunk, Grafana/Loki-style log analysis, PowerShell/Python health checks, structured JSON logs, and service availability dashboards.
- Support PostgreSQL access management, service-account permissions, HBA/firewall coordination, and read-only access for monitoring or integration tools such as Splunk and FME.
- Communicate clearly with technical teams and business stakeholders through ticket updates, change requests, incident analysis, and practical troubleshooting reports.

Inventors Hub R&D

Software Developer / AI Engineer

2024 – 2025

Netherlands

- Built AI and LLM-based prototypes for document processing, recruitment matching, robotics, and automation use cases.
- Developed backend services and APIs using Python, FastAPI, Flask, PostgreSQL, Docker, and cloud/VPS deployment practices.
- Designed and maintained company web presence, combining frontend development, technical content, and practical SEO improvements.
- Deployed and configured an open-source Odoo CRM/ERP system on an unmanaged VPS, including server setup and operational maintenance.
- Worked with open-source LLMs, prompt engineering, and agent-style workflows to create practical AI applications for small-business and R&D scenarios.

- Designed and developed the company website, improving digital presentation and customer access to product information.
- Created product labels, marketing materials, and visual assets aligned with the company brand identity.
- Collaborated with team members to keep digital and printed communication consistent across channels.

Selected Projects

Geospatial API and ArcGIS Publishing Workflows

Designed and improved Python/FastAPI-based workflows for uploading, processing, validating, and publishing spatial data to ArcGIS Enterprise. Work included handling multiple spatial formats, GDAL/OGR configuration, container environment settings, file-size limits, layer TTL/retention, and troubleshooting production-style Kubernetes deployments.

GIS Service Monitoring with Splunk and Health Checks

Developed monitoring approaches for ArcGIS/SVV-style services using structured JSON logs, PowerShell/Python probes, response-time tracking, availability checks, service status summaries, and Splunk dashboards for operational visibility.

EnhanceMatch: AI Recruitment Matching in Zoho CRM

Designed and implemented an AI-driven recruitment solution for Improve to Grow that matches candidate CVs with job applications using filtering logic and intelligent agents. Integrated the workflow directly inside Zoho CRM using Deluge for native candidate-management support.

Minions: Natural-Language Swarm Robot Control

Master's thesis project integrating Large Language Models with Behavior Trees to translate natural-language instructions into executable swarm-robot behaviours. The project focused on making swarm robotics more accessible to non-expert users, with potential applications in search and rescue, agriculture, and warehouse automation.

Odoo CRM/ERP and VPS Deployment

Configured and deployed an open-source Odoo CRM/ERP environment on an unmanaged VPS, including server setup, application configuration, and ongoing operational maintenance.

Education

Master of Science in Artificial Intelligence

2022 – 2024

Vrije Universiteit Amsterdam, Netherlands

Thesis: *Enabling Intuitive Swarm Control with Natural Language Models ("Minions")*

Bachelor of Science in Computer Science

2007 – 2011

Baghdad College of Economic Sciences University, Baghdad, Iraq

Additional Information

- Strong interest in practical AI systems, geospatial automation, cloud-native deployment, open-source tooling, and intelligent GIS applications.
- Comfortable working across Windows, Linux, VS Code, command-line tools, servers, databases, containers, and enterprise support environments.
